

Clearinghouse and Metadata Concepts

Daniel Berhanu

Yaounde, Cameroon

dberhanu@uneca.org

June 16, 2004

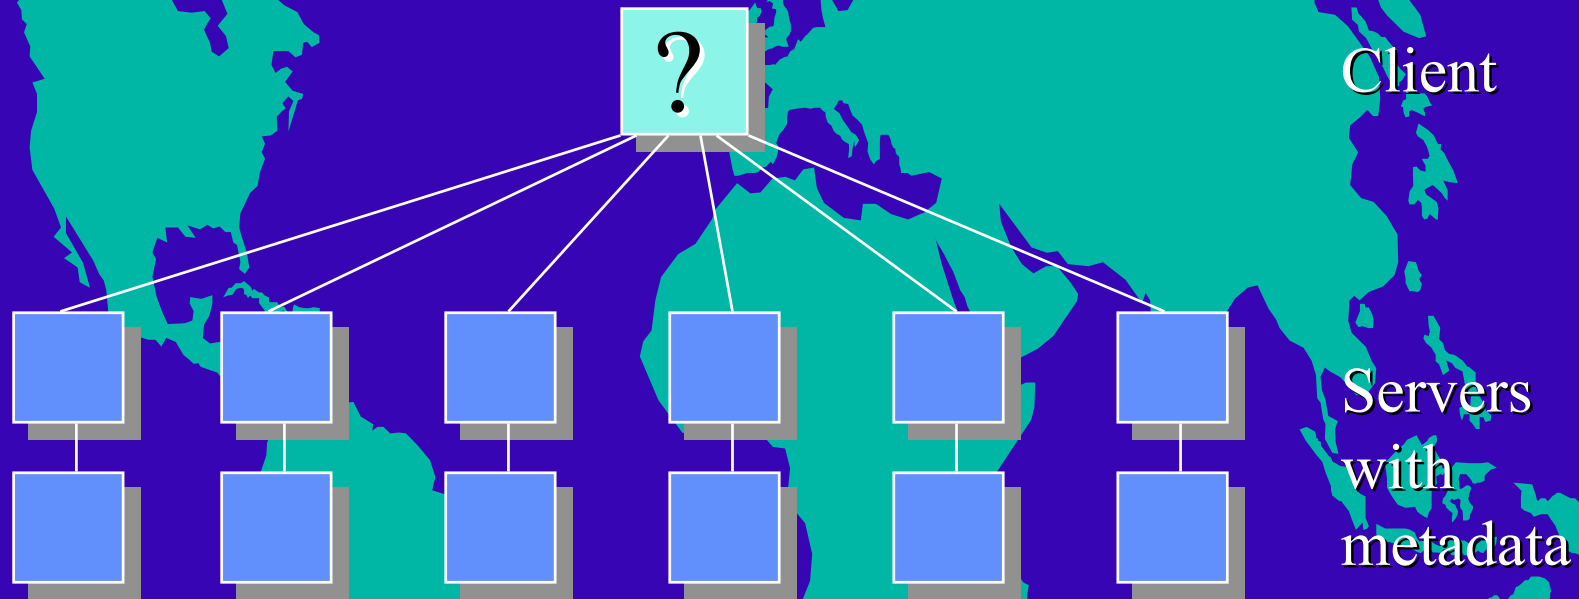

What are Metadata?

- ◆ Field level description of data and information resources, in a standard form
- ◆ Examples:
 - Identification of data resource
 - Originator and location
 - Purpose for which data set was created
 - Data collection date, processes and methods
 - Availability and access constraints
 - ‘Distributor’ and contact details
 - Etc.

Major Benefits of Metadata

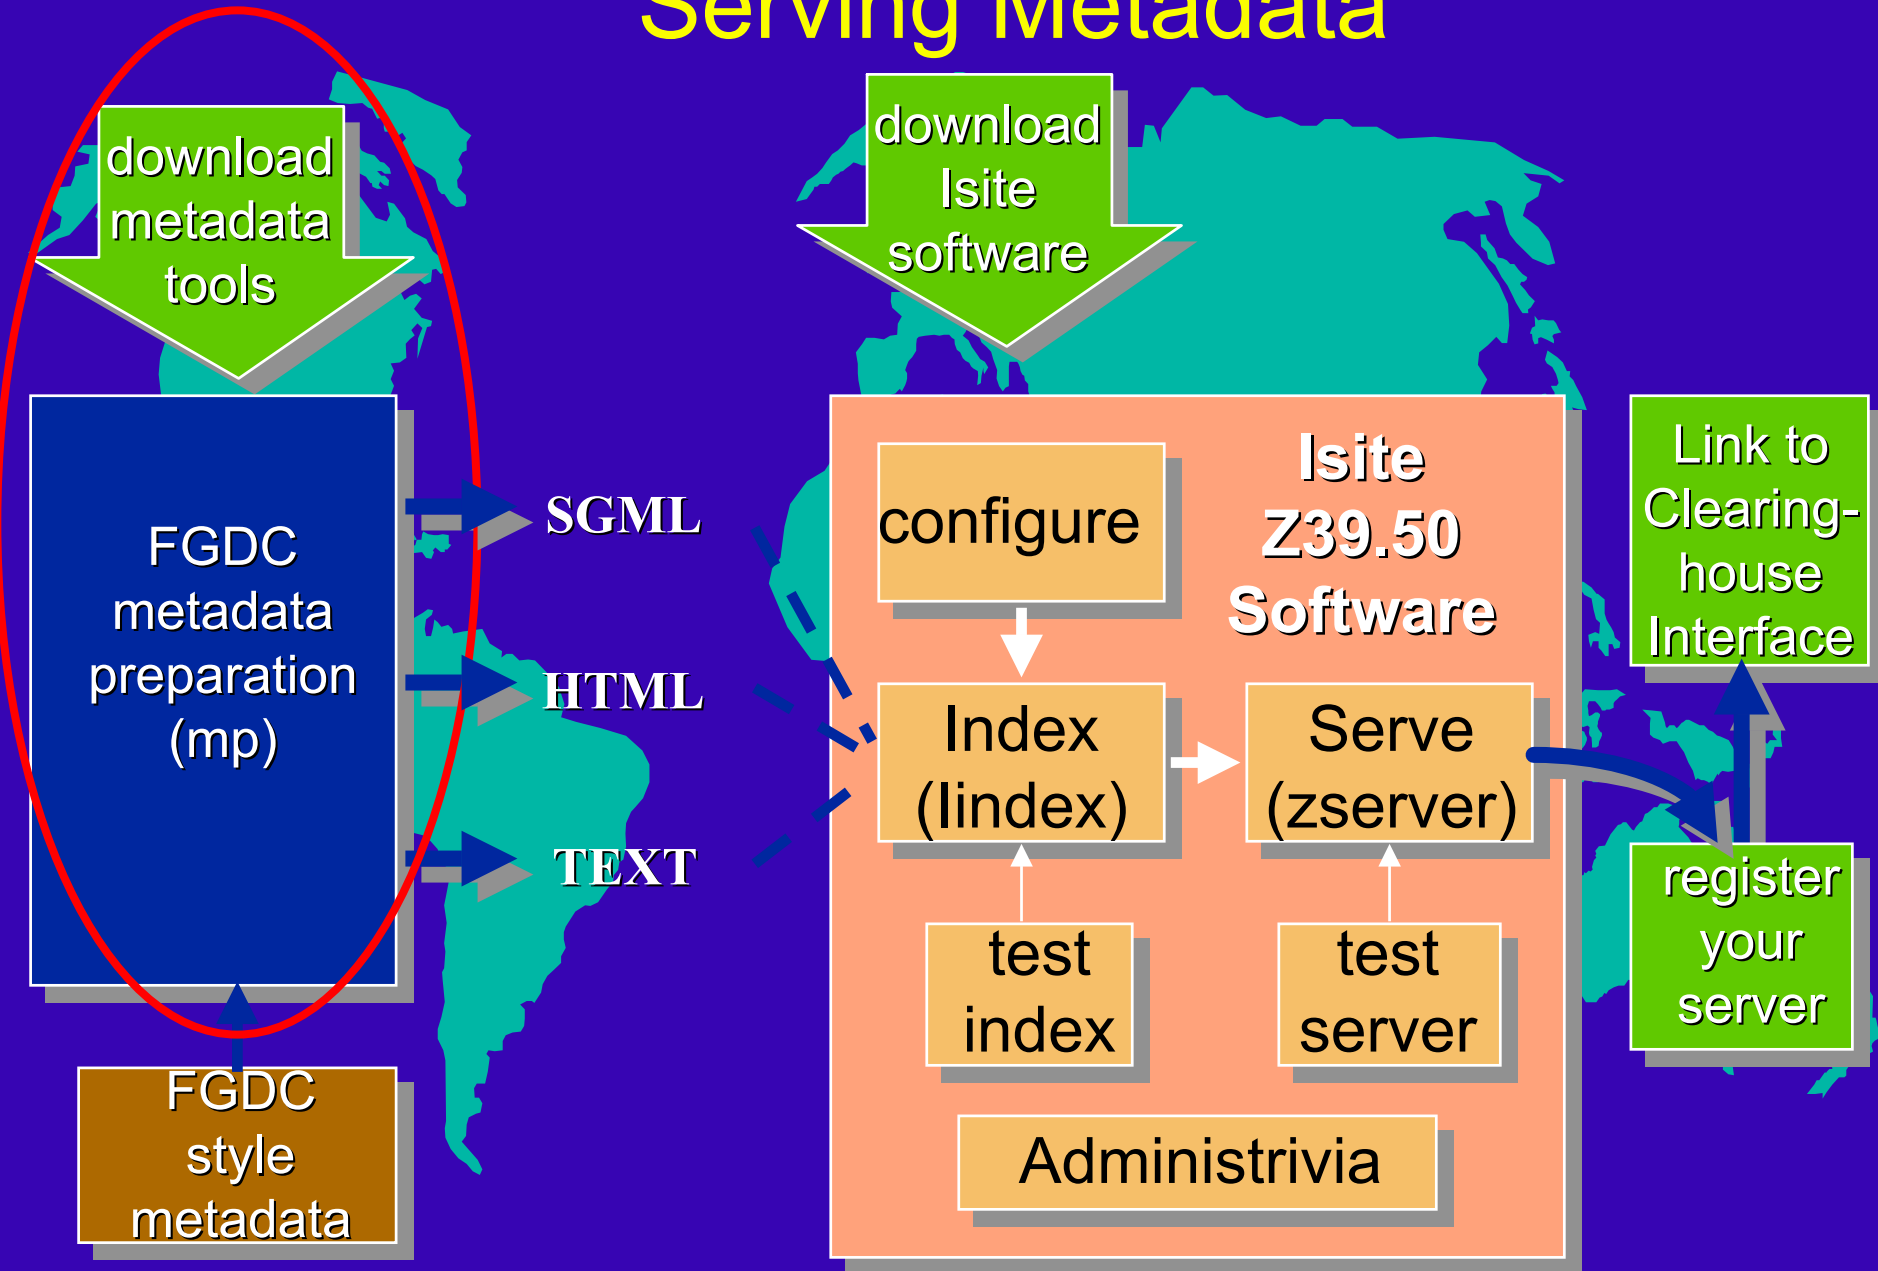

- 
- ◆ Excellent **insight** into your data holding
 - ◆ Faster access to **more suitable** data
 - ◆ No loss of **knowledge** by departing staff
 - ◆ Avoidance of duplicated **efforts & costs**
 - ◆ Increased **client services** against lower cost
 - ◆ Structured **search and comparison** of available data resources by all stakeholders

What is Clearinghouse?

- ◆ Decentralized system of searchable Internet servers containing structured metadata and data
- ◆ Each server is a “peer” in the network

Serving Metadata

Clearinghouse Provides...

- ◆ Uniform, distributed search through a single user interface to all servers worldwide
- ◆ Search for data through fields and full-text in the metadata
- ◆ A common vocabulary for metadata discovery on the Internet
- ◆ Links through to full data access, where available
- ◆ Controlled decentralization of data resources
 - Each resource is maintained by its primary producer with structured description for others to know of its existence and how to access and use it

Specify Date and Content

Specify Time Period of Content

[Help...](#)

*Specify a date or date range for desired spatial data by selecting **one** of the methods below.*

☐ Don't search based on time period

☐ Get data whose date is the date

☒ Get data from through

Search in Full-Text (Any) or by Field

[Help...](#)

Specify search words by using one or more of the fields below.

Search for: in the field

OR
AND

in the field

OR
AND

in the field

OR
AND

in the field

Specify Nodes to search

Select Data Servers to Search

Help...

Specify the data sources to query and the number of records that will be retrieved from each source. Use control key combinations to make multiple selections.

FEMA MMI Project (Q3 and HAZUS data)
FGDC Map Service Test Node
Forest, aquatic, and Rangeland Ecosystems in the Western USA
Framework Data Survey
Geography Department SDSU Clearinghouse
Geography Network
Geological Survey of Alabama Geospatial Data Clearinghouse Node
Georgia GIS Data Clearinghouse
Global Change Master Directory
Greater Yellowstone Area Data Clearinghouse
Guatemala - Clearinghouse /SNIG
Guatemala Clearinghouse Universidad del Valle
Gulf Coast NASA/UL Lafayette Regional Application Center
Gulf of Mexico Geospatial Clearinghouse Node
Hawaii GIS Clearinghouse Node

Search Results

Done with search!

Select the links below to view matches by database.

Database	Status	# Results
Africa Data Dissemination Service	Search Successful	1
FEMA MMI Project (Q3 and HAZUS data)	Search Successful	4
Forest, aquatic, and Rangeland Ecosystems in the Western USA	Search Successful	0
Framework Data Survey	Search Successful	0
Geography Network	Search Successful	18
Global Change Master Directory	Search Successful	1237

Why do Clearinghouse?

- ◆ Minimize duplication of effort in data and metadata collection and processing
- ◆ Provide means to advertise metadata collection requirements, inventory, and quality
- ◆ Support documentation of basic metadata sets for advised re-use of internal and external applications

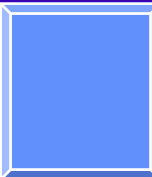

Why not just use Web indexes?

- ◆ On-line indexes support only full-text literal search with limited support for concept search
- ◆ Indices do not support fields or other data types (date, coordinate, other numeric)
- ◆ Place names promote ambiguous geographic search and retrieval
- ◆ Server data increasingly in databases, which are not accessible to web indexes

Metadata Format Issues

- ◆ Clearinghouse requires standardized metadata fields for query, exchange, and presentation
- ◆ Example of existing standards
 - Dublin Core, GILS, FGDC, ISO
- ◆ Standardized encoding for full text and field searches
 - Standard Generalized Markup Language (SGML) being proposed as basis for metadata encoding guideline to enforce structure and help in presentation

Tag-Value Syntax

- ◆ Difficult to produce standard tag-value descriptions of data resources in XML, SGML or other encoding formats, as required for clearinghouse services

Description:

Abstract:

This ARC/INFO polygon coverage contains the third level administrative boundaries at a 1:1000000 scale.

The coverage is part of the Famine Early Warning System (FEWS) / Associates in Rural Development

ENRAEMED: A Metadata Editor

- ◆ Software tool needed for encoding the field level descriptions into required formats

The screenshot shows a software window titled "Identification Information" with a standard Windows-style title bar (minimize, maximize, close buttons). The window contains several tabs: "Title", "Publication", "Keywords", "Description", and "Access". The "Title" tab is currently selected. Inside the "Title" tab, there is a section labeled "Titles" with a table for entering title information. The table has two columns: "Title" and "Title Type". The first row contains the text "Externally Funded Projects Map of Omo Gibe" in the "Title" column and "Main Title" in the "Title Type" column. Below this table is a row with an empty text field, a dropdown menu, and two buttons labeled "+" and "-". Below the "Titles" section is a section labeled "Originator Details" with a table for entering originator information. The table has two columns: "Author" and "Type". The first row contains the text "Richard Woodroof Associates" in the "Author" column and "Corporate Author" in the "Type" column. Below this table is a row with an empty text field, a dropdown menu, and two buttons labeled "+" and "-". At the bottom of the window, there are several input fields: "ISBN" (empty), "Call No" (610.5), "Language" (English), "No. of Copies" (10), "Accession No" (55), and "External Resource" (checkbox). There are also buttons for "Find" and "Close" at the bottom right.

Identification Information					
Title		Publication	Keywords	Description	Access
Titles					
Title				Title Type	
Externally Funded Projects Map of Omo Gibe				Main Title	
Originator Details					
Author				Richard Woodroof Associates	Corporate Author
Type				Tsegaye	Co-Author
ISBN				No. of Copies	10
Call No	610.5			Accession No	55
Language	English			External Resource	<input type="checkbox"/>
<input type="button" value="Close"/>					

ENRAEMED

◆ Ethiopian Natural Resources And Environmental MetaDatabase

-ENRAEMED means Let's Walk Together

◆ Objective

- To make existing information on the nation's natural resources and the environment more accessible to potential users

Federal Partners

- ◆ Ministry of Water Resources
- ◆ Ministry of Agriculture
- ◆ Environmental Protection Authority
- ◆ Ethiopian Mapping Authority
- ◆ Ethiopian Science and Technology Commission
- ◆ Ethiopian Institute of Geological Survey
- ◆ National Meteorological Service Agency

No existing software matched our Functional Requirements

+ Current & future Geospatial MD Standards

+ 2 Bibliographical Metadata Standards

+ Extensive Defaults

+ Memo Manager

+ Freeware

+ XML import

+ Free Database

+ XML export

**WHY
ENRAEMED?**

+ Highly scaleable

+ Element Navigator

+ Spelling Checker

+ Globally unique ID

+ Keyword Selector

+ Multi-lingual

+ Administrator

+ Map-based Bounding Coordinates entry

Maintained and supported by UNEP / FGDC

ECA Clearinghouse Project

- ◆ Assist member states to develop metadata systems and clearinghouse services
 - Point of reference for member states
 - Training at ECA
- ◆ Single point of entry to metadata collections of member states
 - “Country Spaces” for interim hosting of metadatabases
- ◆ Initial focus on geoinformation
- ◆ Registered with FGDC clearinghouse node with worldwide search access

ECA Clearinghouse ...

- ◆ Will extend to other information types
- ◆ Include bibliographic metadata, providing field-level search to all data resources of ECA and partners
- ◆ Install own gateway software to provide direct access to metadata collection
 - Initially indirect access through FGDC
